GENERAL INFORMATION

If there is a possibility that the body and/or parts may be damaged, first remove the danger before performing repair operations.

Example:
1. Apply protection tape to the body adjacent to the body part when removed and installing.

2. When prying off the body parts with a screwdriver or scraper etc., be sure to apply protection tape to the tip or blade to prevent damage to the paint film or body part.

If anti-rust agents are damaged while repairing other parts, be sure to repair the anti-rust agent.

Example:
1. If body sealer, paint film or undercoat are damaged by peeling, cracks etc., be sure to repair each with an anti-rust agent.

2. If a hinge or exterior body panel is loosened or removed, be sure to apply rust inhibitor after repairs.
CLIPS

The removal and installation methods of typical clips used in body parts are shown in the table below.

SEAT BELTS
[Emergency Locking Retractor (ELR) Type]

1. RUNNING TEST (IN SAFETY AREA)
   (a) Fasten the seat belt.
   (b) Drive the car at 10 mph (16 km/h) and make a very hard stop.
   (c) Check that the seat belt is locked and cannot be extended at this time.

   HINT: Conduct this test in safe area. If the belt does not lock, remove the belt mechanism assembly and conduct the following static check. Also, whenever installing a new belt assembly, verify the proper operation before installation.

2. STATIC TEST
   (a) Remove the locking retractor assembly.
   (b) Tilt the retractor slowly.
   (c) Verify that the belt can be pulled out at a tilt of 15 degrees or less, and cannot be pulled out at over 45 degrees of tilt.

   If a problem is found, replace the assembly.

   (Manual Type)

   TESTING
   (a) Adjust the belt to the proper length.
   (b) Apply a firm load to the belt.
   (c) Verify that the belt does not extend.

If problem is found, repair or replace the parts as necessary.
FRAME DIMENSIONS
General Information

1. BASIC DIMENSIONS
   (a) There are two types of dimensions in the diagram.
      (Three-dimensional distance)
      • Straight-line distance between the centers of two measuring points.
      (Two-dimensional distance)
      • Horizontal distance in forward/rearward between the centers of two measuring points.
      • The height from an imaginary standard line.
   (b) In cases in which only one dimension is given, left and right are symmetrical.
   (c) The dimensions in the following drawing indicate actual distance. Therefore, please use the dimensions as a reference.

2. MEASURING
   (a) Basically, all measurements are to be done with a tracking gauge. For portions where it is not possible to use a tracking gauge, a tape measure should be used.
   (b) Use only a tracking gauge that has no looseness in the body, measuring plate, or pointers.

HINT:
1. The height of the left and right pointers must be equal.
2. Always calibrate the tracking gauge before measuring or after adjusting the pointer height.
3. Take care not to drop the tracking gauge or otherwise shock it.
4. Confirm that the pointers are securely in the holes.
