CHECK AND ADJUSTMENT OF CLUTCH PEDAL

1. CHECK THAT PEDAL HEIGHT IS CORRECT
   Pedal height from asphalt sheet:
   173 mm (6.81 in.)

2. IF NECESSARY, ADJUST PEDAL HEIGHT
   Loosen the lock nut and turn the stopper bolt until the
   height is correct. Tighten the lock nut.
   HINT: After adjusting the pedal height, check and ad-
   just the pedal free play and push rod play or booster air
   valve stroke.

3-1. (w/o Clutch Booster)
   CHECK THAT PEDAL FREEPLAY AND PUSH ROD PLAY
   ARE CORRECT
   (Pedal Freeplay)
   Push in on the pedal until the beginning of clutch resis-
   tance is felt.
   Pedal freeplay: 13.0 — 23.0 mm (0.51 — 0.91 in.)
   (Push rod play)
   Push in on the pedal with a finger softly until the re-
   sistance begins to increase a little.
   Push rod play at pedal top: 1.0 — 5.0 mm
   (0.039 - 0.197 in.)

3-2. (w/ Clutch Booster)
   CHECK PEDAL FREEPLAY AND BOOSTER AIR VALVE
   STROKE
   (Pedal Freeplay)
   Push in on the pedal until the clutch begins to resist.
   Pedal freeplay: 15.0 - 30.0 mm (0.59 - 1.18 in.)
   (Booster Air Valve Stroke)
   (a) Stop the engine and depress the clutch pedal several
       times until there is no vacuum left in the clutch
       booster.
   (b) Push in on the pedal with a finger softly until the re-
       sistance begins to increase a little.
   Booster air valve stroke at pedal top:
   5.0 - 9.0 mm (0.20 - 0.35 in.)
   HINT: The booster air valve stroke is the amount of
   the stroke until the booster piston is moved by the booster air
   valve.

4. IF NECESSARY, ADJUST PEDAL FREEPLAY AND PUSH
   ROD PLAY OR BOOSTER AIR VALVE STROKE
   (a) Loosen the lock nut and turn the push rod until the
       freeplay and push rod play are correct.
   (b) Tighten the lock nut.
   (c) After adjusting the pedal freeplay, check the pedal
       height.
   (d) Connect the air duct and install the lower finish
       panel.
5. **INSPECT CLUTCH RELEASE POINT**

(a) Pull the parking brake lever and install wheel stopper.

(b) Start the engine and idle the engine.

(c) Without depressing the clutch pedal, slowly shift lever into reverse position until the gears contact.

(d) Gradually depress the clutch pedal and measure the stroke distance from the point the gear noise stops (release point) up to the full stroke end position.

**Standard distance:** 25 mm (0.98 in.) or more (From pedal stroke end position to release point)

If the distance not as specified, perform the following operation.

- Inspect pedal height.
- Inspect push rod play and pedal freeplay.
- Bleed the clutch line.
- Inspect the clutch cover and disc.

---

### OPERATIONAL TEST OF CLUTCH BOOSTER

**HINT:** If there is leakage or lack of vacuum, repair before testing.

1. **OPERATING CHECK**

   With the engine stopped, depress the clutch pedal several times. Then, with the pedal at the mid point, start the engine and confirm that the pedal sinks down slightly.

2. **AIR-TIGHTNESS CHECK**

   (a) Depress the clutch pedal several times with the engine stopped. Then, start the engine and depress the clutch pedal and check that there is a light difference in pedal effort.

   (b) Start the engine and turn it off after is sufficient vacuum in the booster. Depress the clutch pedal and confirm that the effort required for at least one time is equal to that with the engine running.

**HINT:** If (a) and (b) are not as stipulates, inspect the vacuum check valve and, if necessary, the clutch booster also.
BLEEDING OF CLUTCH SYSTEM

HINT: If any work is done on the clutch system or if air is suspected in the clutch lines, bleed the system of air.

NOTICE: Do not let brake fluid remain on a painted surface. Wash it off immediately.

1. FILL CLUTCH RESERVOIR WITH BRAKE FLUID
   Check the reservoir frequently. Add fluid if necessary.

2. CONNECT VINYL TUBE TO BLEEDER PLUG
   Insert the other end of the tube in a half-full container of brake fluid.

3. BLEED CLUTCH LINE
   (a) Slowly pump the clutch pedal several times.
   (b) While pressing on the pedal, loosen the bleeder plug until the fluid starts to run out. Then close the bleeder plug.
   (c) Repeat this procedure until there are no more air bubbles in the fluid.

4. TIGHTEN BLEEDER PLUG
